

## ABSTRACT

The present invention relates to a laminated article excellent in appearance at a retort treatment, delamination resistance, gas barrier property, further, long-run processability, performance of preventing odor and coloring and the like. The laminated article of the present invention is characterized in comprising a layer (I) containing a saponified product of an ethylene-vinyl acetate copolymer (A) and a polyamide resin (B) and a layer (II) of a polyamide resin (C) which is adjacent to the layer (I) directly or via an adhesive resin layer, wherein the saponified product of an ethylene-vinyl acetate copolymer (A) contains a sodium salt (M1) and a bivalent metal salt (M2), and an amount ratio (M1/M2) of the sodium salt (M1) to the bivalent metal salt (M2) is 0.01 to 15 calculated in terms of metal weight, further comprising 3 to 50 ppm of a phosphorus compound calculated in terms of phosphorus and 10 to 1000 ppm of a hindered phenol antioxidant.
